**DETAILED ACTION**

***Election/Restrictions***

Applicant's election without traverse of claims 1,2,3,5,6,10-12, 14, 15 19, 20, 21, 23 and 24 in the reply filed on 11/17/2008 is acknowledged.

Claims 4, 7-9, 13, 16-18, 22, 25-35 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 11/11/2008.

***Claim Rejections - 35 USC § 112***

Claims 1-3, 10-12, 19-21, are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a stabilizing agent which is an antioxidant, does not reasonably provide enablement for all stabilizing agents such as polymers. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims.

The claims broadly set out a stabilizing agent which can generically read on a polymer carrier. The specification however is specific in its reference to the use of antioxidants to help preserve the bioactive activity. The claims should therefore clearly

set out that these stabilizing agents consist of antioxidants (see page 20, line 5 for example).

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 rejected under 35 U.S.C. 102(b) as being anticipated by Faxon.

Faxon discloses a polymeric coated stent containing rapamycin. The Syntetic polymers read on stabilizing agents” since they hold the bioactive in place and prevent it from being immediately degraded or oxidized. As such, the instant claims are anticipated by Faxon.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,2,3,5,6,10-12, 14, 15, 19-21, 23 and 24 rejected under 35 U.S.C. 103(a) as being unpatentable over Faxon in view of Tardiff.

As noted above, Faxon discloses a polymeric coated stent containing rapamycin. The Syntetic polymers read on stabilizing agents" since they hold the bioactive in place and prevent it from being immediately degraded or oxidized.

Tardiff discloses the use of antioxidants such as probucol (a butylated hydroxytoluene) also for use in treating restenosis (see Abstract).

Those of ordinary skill would have therefore found it well within their skill to combine the well known therapies of Faxon which sets out a polymer coated stent containing rapamycin, and Tardiff which sets out probucol as an agent for use against restenosis. The use of both agents in a coated stent would have flowed from these teachings with a reasonable expectation of beneficial results against restenosis. Therefore the use of both rapamycin and probucol in a polymer coated stent would have been obvious to one of ordinary skill in the art at the time of invention given the combined teachings of Faxon and Tardiff.

The Wikipedia citation for probucol is cited as a reference of interest.
